DOJO TECHNOLOGY PRODUCES 1 MILLION NATIVE FILES FOR INTERNATIONAL FIRM

Dojo – a Foreign Language Processing Specialist – Processes Over 300 Million Records Identifying Over 1 Million Relevant Records

Processing information from over 100 custodians culminating in the identification and searching of over 300 million records, Dojo has announced completion of a native file production exceeding 1 million responsive records.

“This was a diverse project which took advantage of the foreign language capabilities of Dojo’s processing tools,” said Dojo President Ed Hamilton. “This project involved forensically archived drives, de-duping at the media, custodian and project level as well as the searching of tens of millions of records for key term responsiveness.”

Adding complexity to the project was the scope of the international data collection. Computers and custodian data was identified in several different languages and time zones throughout the world. As such Dojo worked with the client to fine-tune search terms that represented key phrases in English, Korean and Japanese.

“The result was a large-scale production that met our client deadlines and resulted in a very positive review of our services,” Hamilton said.

Since early 2002 Dojo has been providing custom electronic discovery services to the legal community. Dojo’s primary mission is to assist law firms in identifying and searching large volumes of computer-based data that is pertinent to on-going litigation.
